

Wednesday's Maths

Today we would like you to try measuring things in your home with the metre stick. We've chosen two things for you to measure and then you can choose two of your own. Before you measure each item first make an estimate of how many metres it might measure. An estimate is a good guess. Then measure and write in your result. It is OK if the estimate is different to the result!

	What you will measure	Estimate	Result
1	The length of your bedroom		
2	The length of your kitchen		
3			
4			
5			

As an extra challenge you could draw a picture of you measuring.
